

# User Experience

- We liked the red marking of which error is happening on
- We liked the asterisk that shows which fields are required
- We like the log in design

- We liked the design of the error messages
- We liked the log in button design

## Implementation:

We want the user experience to be easier by giving both clear error messages and adding more color to which fields are incorrect. We also want to implement different colors to the login button also implementing specific colors to buttons that are related.
